

CopyFax combines document and data capture, process automation, workflow, imaging, enterprise report management, and secured access in a single, browser-based application.

By dynamically organizing and controlling the delivery of documents and data to the workforce through an intuitively elegant interface, CopyFax enables organizations to innovate their business operations, increase productivity and share information among employees, partners and customers.

CopyFax helps you conquer the paper mountain!

CAPTURE

Image and organize your data in a highly secure and accessible repository.

Structured and Unstructured Data

STORE

Captured information is indexed and stored in a server that manages the flow of information and monitors all document activities. We safeguard your vital information from being "lost" through misuse, misplacement, or disaster.

SECURE

Your data is protected in a highly secure data repository, maintaining your corporate policies and procedures, providing a complete audit trail for all user interactions.

EXCHANGE

Our software easily integrates with CRM, ERP, accounting and other enterprise applications, providing a framework for managing your entire network infrastructure.

SERVE

Digitized information can be instantly accessed by authorized users through a browser-based interface, resulting in optimized business processes and increased efficiency of work performed.
